PROFESSIONAL SUMMARY

Cross-functional engineer and product builder with 3+ years of experience across electrical engineering, technical support, and project delivery. Draws on firsthand experience operating a live restaurant business to identify customer and workflow problems; over the past 6 months, has applied AI-assisted development and automation to build production systems for direct ordering, Loyverse POS integration, delivery settlement reconciliation, and daily profit reporting. Combines hands-on operations, customer service, and technical delivery while retaining ownership of requirements, architecture, testing, and production validation.

TECHNICAL SKILLS

AI-assisted engineering: Claude Code, Codex CLI, Gemini, Hermes Agent, requirements analysis, debugging, code review, testing, documentation
Full-stack and integration: TypeScript, JavaScript, Python, REST APIs, Supabase, PostgreSQL, Vercel, Docker, Git, GitHub, web application architecture
Data and automation: SQL, Apache Airflow, Apache Spark, dbt, BigQuery, GCS, Looker Studio, scheduled pipelines, reconciliation workflows
Delivery and operations: Process mapping, stakeholder coordination, production troubleshooting, root-cause analysis, technical documentation
Languages: Thai native; English basic working communication

SELECTED PRODUCTION AND BUSINESS PROJECTS

Delivery Finance and Profit Automation | fatcat.stream

TypeScript | Python | Supabase and PostgreSQL | Vercel | Docker | API integration

- Built and deployed a restaurant finance dashboard that consolidates daily Grab and LINE MAN sales, platform fees, deductions, and net payouts for management review.
- Automated data collection, food-cost calculations, and profit reporting so daily performance is available without manual spreadsheet consolidation.
- Turned firsthand operating pain points across platform fees, food costs, payouts, and daily profitability into a scheduled workflow with branch-level financial visibility.

Customer Ordering and Loyverse POS Integration | order.fatcat.stream

TypeScript | Supabase | Vercel | Loyverse integration | LINE login

- Built and deployed a mobile ordering web application for direct restaurant customers, reducing staff time spent answering messages and manually entering orders.
- Integrated confirmed orders with Loyverse so the existing POS and kitchen-print workflow continues without replacing the store's operational system.
- Implemented menu search, cart, LINE login, customer accounts, reorder, rewards, and order history around the restaurant's delivery-to-room operating model.

Restaurant Operations and Product Ownership | order.fatcat.stream

LINE MAN | Grab | Customer service | Order operations | Cost control

- Operates the live restaurant behind the products, earning 190+ LINE MAN reviews at 4.8 and 60+ Grab reviews at 4.9.
- Owns customer communication, order intake, kitchen handoff, menu updates, platform settlement, cost control, and issue resolution; converts recurring operational problems and customer feedback into product requirements.

AI-assisted Product Development Workflow | github.com/OhmSaharath

Claude | Gemini | Codex | Hermes Agent | CLI workflows

- Uses CLI AI agents for requirements breakdown, implementation, debugging, repetitive engineering work, code review, and documentation while personally validating architecture and production behavior.
- Applied AI production workflows to short-form content and achieved more than 300,000 views on TikTok and Shorts.

PROFESSIONAL EXPERIENCE

Senior Support Engineer and Project Manager - Entech Industrial Solution Co., Ltd. Jul 2024 - Jul 2025

- Led end-to-end delivery of a 20M THB Robotics Lab for the Navaminda Kasatriyadhiraj Royal Air Force Academy, coordinating military, academic, vendor, and subcontractor stakeholders through technical acceptance.
- Oversaw network configuration, UPS backup systems, server racks, robotics equipment, installation planning, issue resolution, and handover readiness for a mission-critical facility.
- Completed specialized technical training at Testo SE and Co. KGaA in Germany on monitoring software and precision sensor networks.

Electrical Engineer - Palmer and Turner Consultants Thailand Co., Ltd. May 2023 - Jun 2024

- Designed electrical power distribution, fire alarm, and CCTV systems for Sansiri Sukhumvit 51 and Ekkamai Condo, coordinating requirements with architects and MEP consultants.
- Used AutoCAD, Revit, BIM coordination, load calculations, voltage-drop analysis, and Dialux to resolve design conflicts and prepare compliant construction documentation.

Technical Support Specialist - Entech Industrial Solution Co., Ltd. Oct 2021 - Mar 2023

- Designed and supervised system installations for Reckitt and Chulabhorn Hospital, managed subcontractors, and provided post-installation troubleshooting to maintain system reliability.
- Produced data-driven service reports, maintained structured support records, and translated instrument performance trends into maintenance recommendations for clients.

EDUCATION AND PROFESSIONAL DEVELOPMENT

Bachelor of Engineering in Electrical Engineering - KMUTT 2021

- Academic projects: IoT elevator monitoring and solar stove monitoring.

Data Engineering Bootcamp Batch 5 - Skooldio

- Built an end-to-end data pipeline using Apache Spark, dbt, BigQuery, GCS, and Looker Studio.

Additional certifications: Data Analyst Professional Certificate - Badgr; 1st Level Support, Saveris Pharma - Testo SE and Co. KGaA, Germany
